

Homework Assignment 2: Computation and the World

“Software is changing everything. You are learning the skills to enact this transformation. From your worldview/faith tradition how would you want your software to transform something you are passionate about?”

Write a one page essay (single-spaced in 12pt font) in response of the above question. Turn it in on BlackBoard.

In the first part of your essay discuss what transformation(s) you would like to see. This could be something grand that could change all of society, or something small but in your opinion significant.

In your second part, try to connect your worldview/faith tradition to the transformation(s) have just explained. Everyone has a worldview, and it does not have to be a Christian one. Think deeply about what you are passionate about and why.

In the final part, discuss to what piece of software you might create that will enable this transformation. You do not need to describe details of how your software will be implemented; only what you wish your software to achieve.

Grading Rubric

This is a *pass/fail* assignment. My expectation is that you provide a thoughtful response to the assignment question. A *fail* for this essay will receive a 0.
